

MES FOR INFOR SYTELINE MANUFACTURERS

SyteLine is your system of record. The Lake MES Platform is your system of execution.

The shop-floor platform for SyteLine manufacturers. Labor, documents, machines, quality, analytics and a command center, built for Infor SyteLine, on the SyteLine database, sold as one platform, grown by switching capability on.

Available now, and it grows with every release.

Every Lake customer can move to the platform. Each customer moves at its renewal, starting January 1, 2027, and can move sooner through December 31, 2026.

650+

manufacturers run Lake software today

Since 1983

The Lake Companies has served more than 1,000 manufacturers over four decades, through SyteLine implementations, services and its own products, focused on the Midwest.

Built for SyteLine only

Every product is built for SyteLine, on premises or in Infor's multi-tenant cloud, and supported by The Lake Companies.

SOUND FAMILIAR?

Three questions we hear on almost every shop floor. None of them has a one-product answer.

"We quoted 30% margin and delivered 28. Where did the two points go?"

The answer spans labor at the station, machine time and the job cost in SyteLine. Three sources, or one record.

"Is the machine shop carrying its own weight?"

The answer spans machine utilization, the labor booked against it and the cost of both. Three sources, or one record.

"Will this order ship on time, and if not, which one do I bump?"

The answer spans the live queue on the floor, the inspection holding it and the schedule. Three sources, or one record.

WHAT BUYING IT IN PIECES COSTS

Most floors are assembled one gap at a time. Here is what that looks like, and what changes on one platform.

A FLOOR BUILT FROM POINT TOOLS	ON THE LAKE MES PLATFORM
Labor A time-capture tool with its own database, synced to SyteLine on a schedule. Job cost catches up on Friday.	Shop-Trak posts straight into SyteLine Clock-ins, quantities and scrap land on the job as the work happens. Job cost is right while the job is open.
Documents Drawings on a shared drive, instructions in a binder, labels from a third tool. Which revision is on the bench is anyone's guess.	Doc-Trak: the right document finds the work Certificates, labels, packing slips and work instructions produced from SyteLine and delivered where the work is.
Machines A monitoring system on its own screen, with its own login, that never learned the job number.	Machine-Trak: every machine finally talking Any asset reports run, idle and down. OEE and utilization first, then the downtime reasons behind them. The job link to Shop-Trak is expected by the end of 2026.
Quality NCRs in a spreadsheet or an aging database beside the ERP. The defect is found at the dock.	Quality-Trak: catch it at the operation, not the dock Nonconformance, corrective action and engineering change inside SyteLine, on the job.
Cost Labor, machine and quality cost reconciled after month-end, by hand.	Fact-Trak: answers before month-end Actuals against standard by job and work center, from your SyteLine data, while there is still time to act. Part of the Pro tier.
Visibility Five logins and a status meeting to find out what happened overnight.	Vantage: Your Command Center Role-based views of the whole plant, included in every tier. Expected early 2027.

"You are buying one-off solutions and becoming a systems integrator yourself to create what we give you off the shelf."

Every seam between point tools is yours to build, test after each SyteLine upgrade, and keep working. On the platform the seam is ours.

ONE PLATFORM, FOUR LAYERS

Read it from the bottom up. That order is the difference.

Most shop-floor software starts at the dashboard and reaches down for data it does not own. The Lake MES Platform starts where the data is made, on the SyteLine database, and builds up from there.

4 Experience	One window per role. Vantage, Your Command Center, composes the layers below into a view for each job in the plant.	EXPECTED EARLY 2027
3 Intelligence	AI across the platform flags jobs at risk of going late and cost drifting from standard. A person decides.	PLANNED 2027
2 Workflow	Cross-product workflows that act on the data: scrap at the station raises a quality case, a machine condition opens work, certification gates the clock-in.	IN DEVELOPMENT
1 Data foundation	Labor, documents, machines, quality and cost, captured on the SyteLine database by Shop-Trak, Doc-Trak, Machine-Trak, Quality-Trak and Fact-Trak. Four decades of it.	AVAILABLE NOW

SIX CAPABILITIES, ONE PLATFORM

Each product is what it contributes to the floor, not a separate purchase.

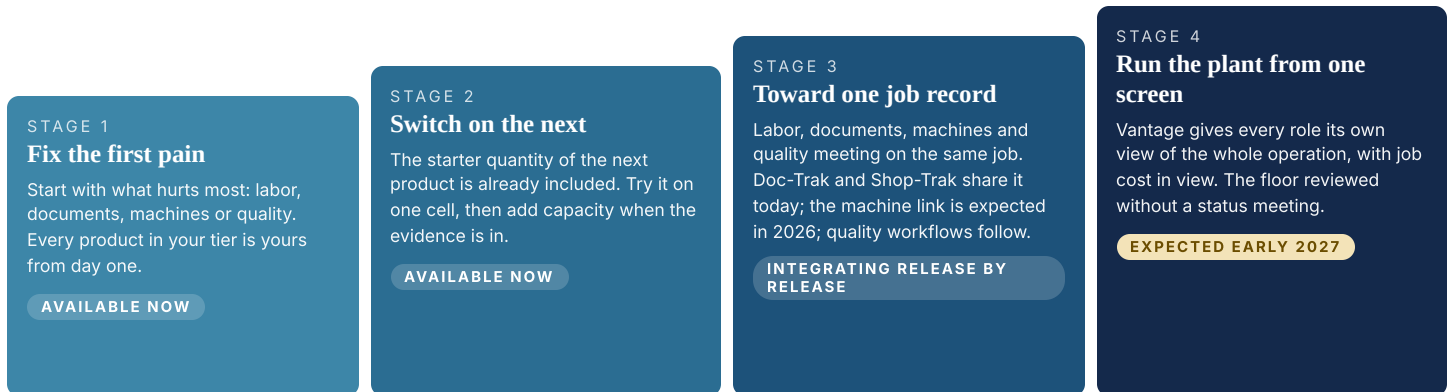

Shop-Trak <i>Capture the work. Validate it. Post it.</i> Labor, quantities and scrap at the operation, posted into SyteLine as the work happens. Visual Dispatch on the floor; Mobile in a browser. Contributes: labor and execution. AVAILABLE NOW	Doc-Trak <i>The right document finds the work.</i> Packing slips, certificates, labels and work instructions produced from SyteLine and delivered where they are needed, working with the repositories you already have. Contributes: the documents and instructions. AVAILABLE NOW	Machine-Trak <i>Every machine finally talking.</i> Any asset, connected: CNC, PLC-based or legacy. OEE and utilization first, then downtime reasons, with drill-down that answers why. Connections may require a setup fee. Contributes: machine state and time. AVAILABLE NOW
Quality-Trak <i>Catch it at the operation, not the dock.</i> Nonconformance and corrective action, engineering change, audits and inspections at the operation, inside SyteLine. Sold as part of the platform; SyteLine 9 and later. Contributes: quality and change. AVAILABLE NOW	Fact-Trak <i>Answers before month-end.</i> Analytics and planning on your SyteLine data: actuals against standard by job and work center. Part of the Pro tier. Contributes: cost and plan. AVAILABLE NOW	Vantage <i>Your Command Center.</i> Role-based views of the whole plant: late jobs, quiet work centers, machine state and attainment in one place. Included in every tier. Contributes: nothing new to the data. It composes the rest. EXPECTED EARLY 2027

Shop-Trak, Doc-Trak and Fact-Trak work on your SyteLine data today, and Quality-Trak runs inside SyteLine. We connect them further with every release. Doc-Trak and Shop-Trak already share the job; the Shop-Trak and Machine-Trak job link is expected in 2026.

YOUR PLATFORM JOURNEY

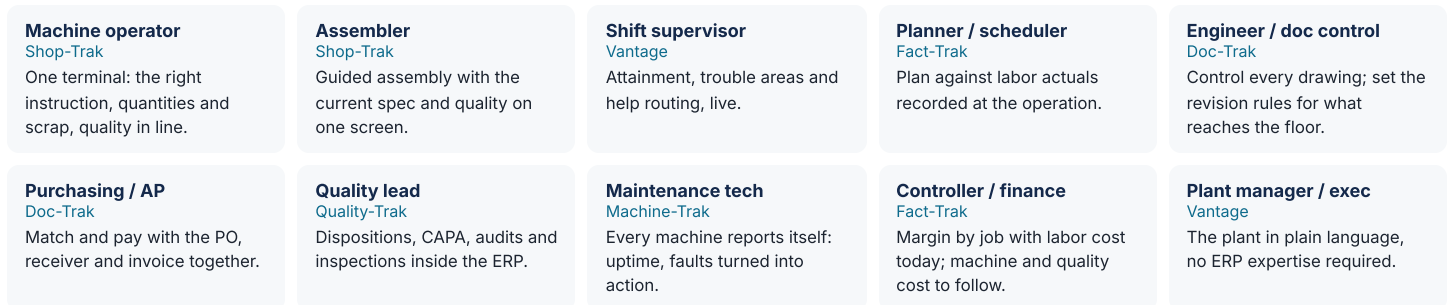

Start where it hurts. Grow by switching it on.

Your tier includes a license for each of its products, with starter quantities included, so each stage starts as a pilot, not a purchase. The pain picks where you start; the platform is what you buy.

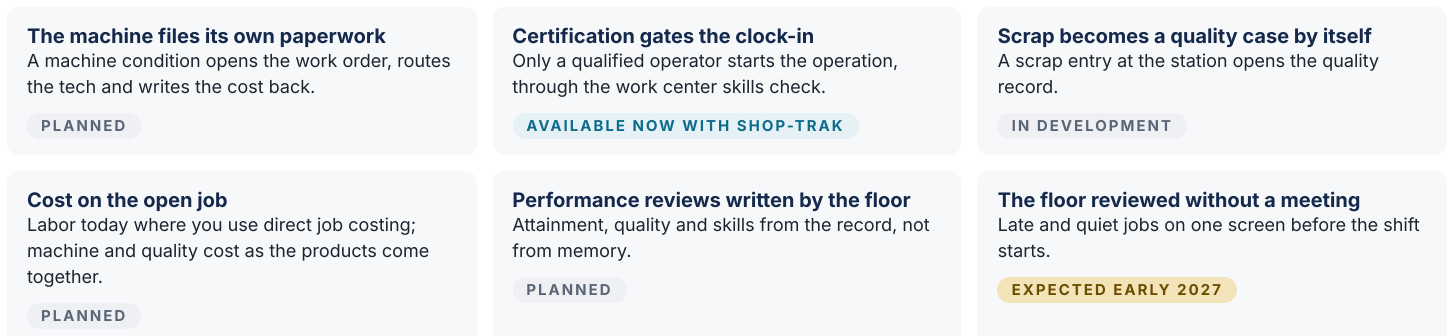

TEN ROLES, ONE WINDOW EACH

Nobody opens five products. Everybody works from the same job.

Vantage windows are expected early 2027. Until then, each role works in its product window on SyteLine.

ONLY A PLATFORM CAN DO THIS

HOW YOU BUY IT

You buy the platform once. You grow it by switching on.

One platform, one subscription, one renewal

Your tier includes a license for each of its products, with starter quantities included, and you install what you need. One agreement covers all of it.

Capacity scales, capability activates

Add devices, users, seats or machines as you grow. New capability is switched on, not reinstalled. Each product has a short activation guide. Machine-Trak connections may require a setup fee.

Care after go-live, included

Check-ins and activation help are part of the subscription. We'd rather come solve a real problem on your floor than run you through a demo.

Four tiers

Entry, Essential and Pro, plus Custom, priced for your operation. Pro adds full Fact-Trak. Vantage is included in every tier.

Your price comes from your account team

They size the platform with you and confirm the numbers in a written quote. We do not publish prices.

Where it runs

Every Lake customer can move to the platform. The fully integrated platform runs on current SyteLine versions. Moving to Infor's multi-tenant cloud? The Lake MES Platform moves with you. Your account team will confirm what your version supports.

ALREADY A LAKE CUSTOMER?

You move at your renewal, starting January 1, 2027. Current Lake customers receive loyalty pricing on the platform. Everything you own is carried onto the platform, and the products you do not own yet are included with starter quantities, so the next fix is a switch, not a project.

Each customer moves at its renewal, starting January 1, 2027, and can move sooner through December 31, 2026.

WHY THE LAKE COMPANIES

Built for SyteLine, by The Lake Companies

Built and supported by the team that has implemented SyteLine for four decades. Each SyteLine release is tested by Lake, then the platform release follows.

The data layer, at the source

Others reach the floor's data from outside through ERP feeds. The platform generates it on the SyteLine database, from the station to the machine.

A partner, not a project

1,000+ manufacturers served since 1983, focused on the Midwest. 650+ running Lake software today. Support through one portal, every inquiry.

START WHERE IT HURTS. KEEP CLIMBING.

SyteLine is your system of record. The Lake MES Platform is your system of execution.
